

DIGITAL DUSK AND DAWN LIGHTING CONTROL

EPA Products Ltd has now introduced a digital dusk and dawn dimmer control. The digital dusk dawn control has been designed to be used with EPA high frequency energy saving fluorescent lighting, and tungsten lighting. Basic on/off times are still adjusted on a standard 24 hour lighting control clock. The first set of digits is the time span for lighting ramping up and down is adjusted from 1-99 minutes. The second set of digits is the desired brilliance adjusted as a percentage.

The memory is not lost during a power failure and as an extra saving at 0% lighting after a short period the control circuit opens completely switch the lighting completely off.

EPA Products has produced lighting and ventilation control panels in house for 40 year and are pleased to quote for any lighting or ventilation requirement.
